

# GS 1. — 1. kolokvij (B) (2023./2024.)

## Zadatak 1.

Superpozicijskim postupkom nacrtajte dijagram momenata savijanja!

$$M_1 = 125 \text{ kNm}$$

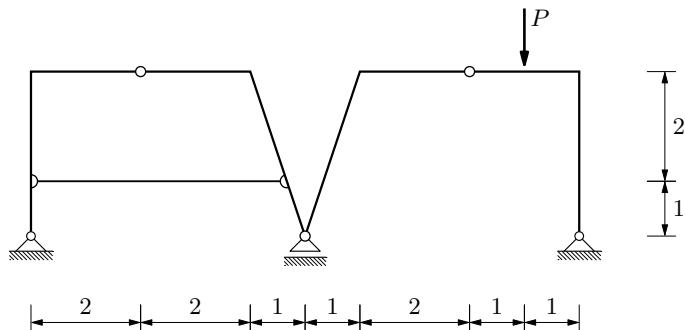

$$M_2 = 75 \text{ kNm}$$

## Zadatak 2.

Nacrtajte dijagrame unutarnjih sila!

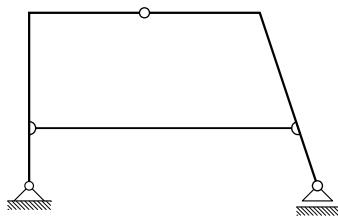

$$P = 100 \text{ kN}$$

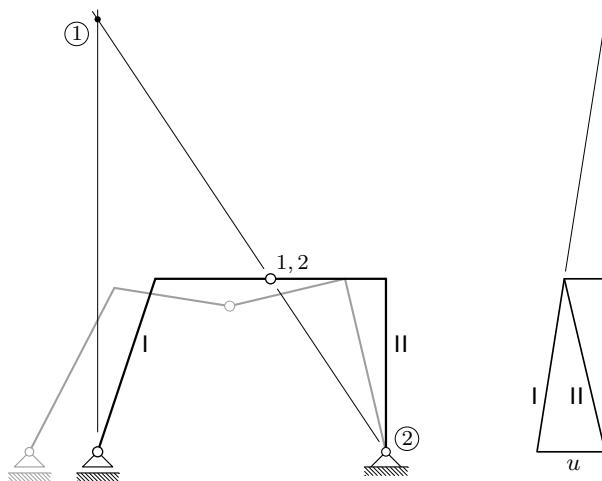

(Za potpuniju i podrobniju priču pročitajte primjer rješavanja analognoga<sup>1</sup> sistema — trozglobnoga nosača koji se „oslanja” na trozglobni nosač sa zategom — u datoteci <http://master.grad.hr/nastava/gs/gs1/isp/1-220906-2.pdf>, dostupnoj na stranici s bilješkama s predavanja (<http://master.grad.hr/nastava/gs/gs1/>)<sup>2</sup>.)

prepoznavanje statičkoga sistema: složeni ulančeni sistem

„temeljni” podsistem: lijevi podsistem — trozglobni nosač sa zategom:

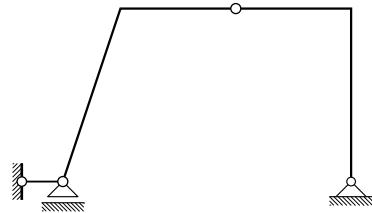

desni podsistem bez lijevoga podsistema — mehanizam:

<sup>1</sup> „Analogn — koji je nečemu nalik, koji je po nekoj osobini nečemu sličan, koji nečemu odgovara; istovrstan” [Hrvatski jezični portal, <https://hjp.znanje.hr>].

<sup>2</sup> Poveznice na tu stranicu možete naći i na stranici predmeta na Merlinu.

desni podsistem slijeva „temeljen” na lijevom podsistemu — trozglobni nosač:

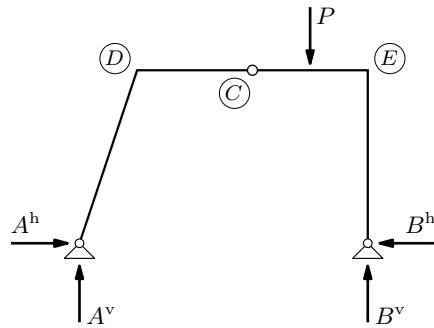

redoslijed rješavanja:

reakcije trozglobnoga nosača → opterećenje trozglobnoga nosača sa zategom

⇒ (1) trozglobni nosač pa (2) trozglobni nosač sa zategom

(1) trozglobni nosač:

vrijednosti reakcija:

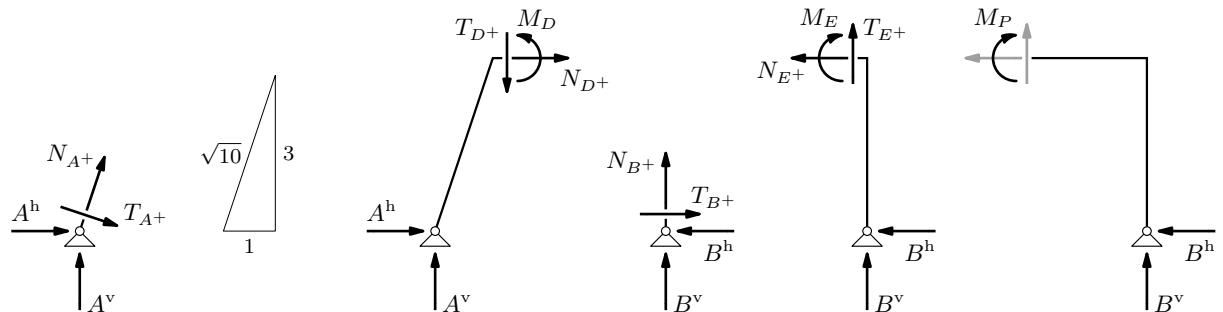

$$\sum_{\widehat{AB}} M_B = 0 : \quad -5 \cdot A^v + 1 \cdot P = 0 \quad \Rightarrow \quad A^v = \frac{P}{5} = 20 \text{ kN}$$

$$\sum_{\widehat{AB}} M_A = 0 : \quad -4 \cdot P + 5 \cdot B^v = 0 \quad \Rightarrow \quad B^v = \frac{4 \cdot P}{5} = 80 \text{ kN}$$

$$\sum_{\widehat{AC}} M_C = 0 : \quad -3 \cdot A^v + 3 \cdot A^h = 0 \quad \Rightarrow \quad A^h = A^v = 20 \text{ kN}$$

$$\sum_{\widehat{AB}} F_x = 0 : \quad A^h - B^h = 0 \quad \Rightarrow \quad B^h = A^h = 20 \text{ kN}$$

vrijednosti unutarnjih sila:

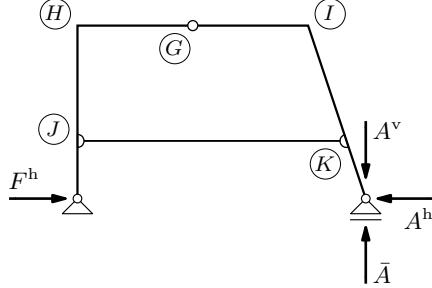

$$\sum_{\widehat{AD}} M_D = 0 : \quad 3 \cdot A^h - 1 \cdot A^v + M_D = 0 \quad \Rightarrow \quad M_D = -40 \text{ kNm}$$

$$\begin{aligned}
\sum_{\widehat{BE}} M_E &= 0 : \quad -3 \cdot B^h - M_E = 0 \quad \Rightarrow \quad M_E = -60 \text{ kNm} \\
\sum_{\widehat{BP}} M_P &= 0 : \quad -3 \cdot B^h + 1 \cdot B^h - M_P = 0 \quad \Rightarrow \quad M_P = 20 \text{ kNm} \\
\left. \begin{array}{l} \sum_{A^+} F_x = 0 : \quad \frac{1}{\sqrt{10}} N_{A^+} + \frac{3}{\sqrt{10}} T_{A^+} + A^h = 0 \\ \sum_{A^+} F_z = 0 : \quad -\frac{3}{\sqrt{10}} N_{A^+} + \frac{1}{\sqrt{10}} T_{A^+} - A^v = 0 \end{array} \right\} \quad \begin{array}{l} N_{A^+} = -8\sqrt{10} \text{ kN} \\ T_{A^+} = -4\sqrt{10} \text{ kN} \end{array} \\
\sum_{B^+} F_x &= 0 : \quad -B^h + T_{B^+} = 0 \quad \Rightarrow \quad T_{B^+} = B^h = 20 \text{ kN} \\
\sum_{B^+} F_z &= 0 : \quad -B^v - N_{B^+} = 0 \quad \Rightarrow \quad N_{B^+} = -B^v = -80 \text{ kN} \\
\sum_{D^+} F_x &= 0 : \quad A^h + N_{D^+} = 0 \quad \Rightarrow \quad N_{D^+} = -A^h = -20 \text{ kN} \\
\sum_{D^+} F_z &= 0 : \quad -A^v + T_{D^+} = 0 \quad \Rightarrow \quad T_{D^+} = A^v = 20 \text{ kN} \\
\sum_{E^+} F_x &= 0 : \quad -B^h - N_{E^+} = 0 \quad \Rightarrow \quad N_{E^+} = -B^h = -20 \text{ kN} \\
\sum_{E^+} F_z &= 0 : \quad -B^v - T_{E^+} = 0 \quad \Rightarrow \quad T_{E^+} = -B^v = -80 \text{ kN}
\end{aligned}$$

(2) trozglobni nosač sa zategom:

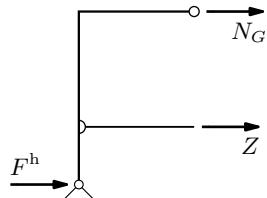

vrijednosti reakcija:

$$F^h = A^h = 20 \text{ kN}$$

$$\bar{A} = A^v = 20 \text{ kN} \quad \& \quad F^v = 0$$

vrijednost sile u zategi:

$$\sum_{\widehat{FG}} M_G = 0 : \quad 3 \cdot F^h + 2 \cdot Z = 0 \quad \Rightarrow \quad Z = -\frac{3}{2} \cdot F^h = -30 \text{ kN}$$

$$\sum_{\widehat{FG}} F_x = 0 : \quad F^h + Z + N_G = 0 \quad \Rightarrow \quad N_G = -F^h - Z = 10 \text{ kN}$$

vrijednosti ostalih unutarnjih sila:

$$M_J = -1 \cdot F^h = -20 \text{ kN}$$

$$M_K = 1 \cdot A^h = 20 \text{ kN}$$

$$T_{F+} = -F^h = -20 \text{ kN}$$

$$T_{H-} = N_G = 10 \text{ kN}$$

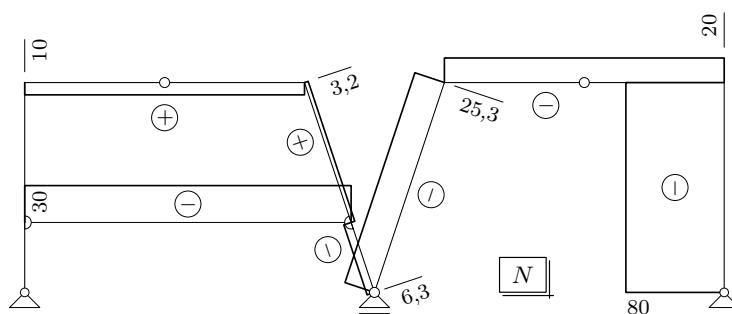

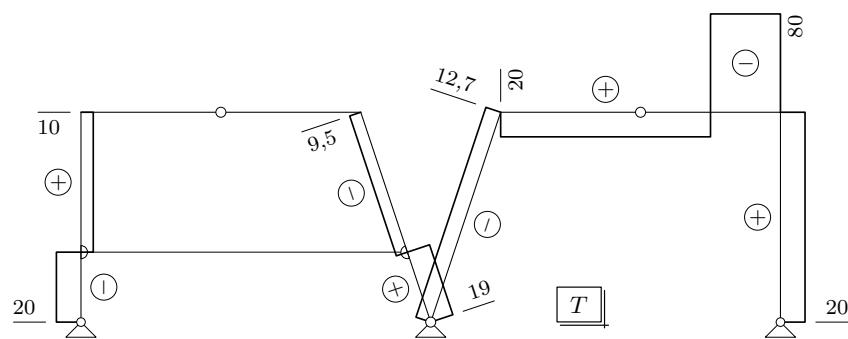

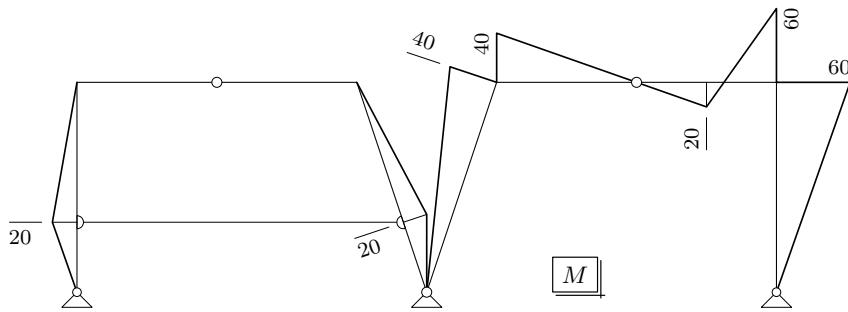

$$T_{\bar{A}+} = \frac{3}{\sqrt{10}} A^h = 6\sqrt{10} \text{ kN}$$

$$N_{\bar{A}+} = -\frac{1}{\sqrt{10}} A^h = -2\sqrt{10} \text{ kN}$$

$$T_{I-} = -\frac{3}{\sqrt{10}} N_G = -3\sqrt{10} \text{ kN}$$

$$N_{I-} = \frac{1}{\sqrt{10}} N_G = \sqrt{10} \text{ kN}$$

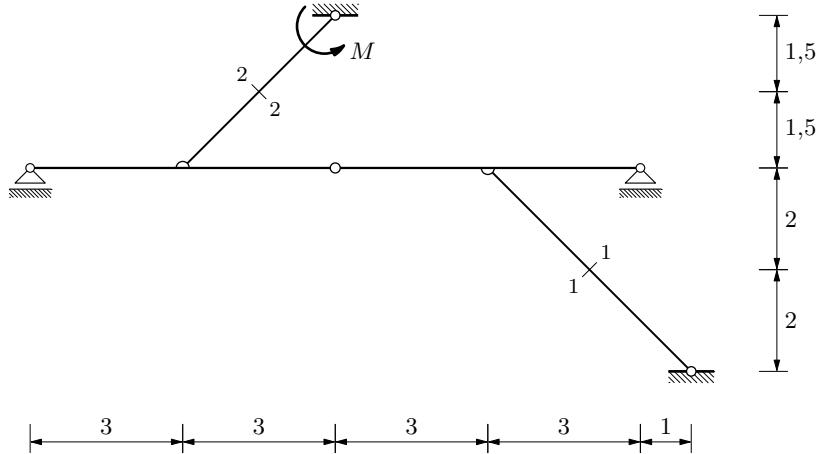

dijagrami:

### Zadatak 3.

Grafičkim postupkom odredite vrijednosti unutarnjih sila u presjecima 1–1 i 2–2!

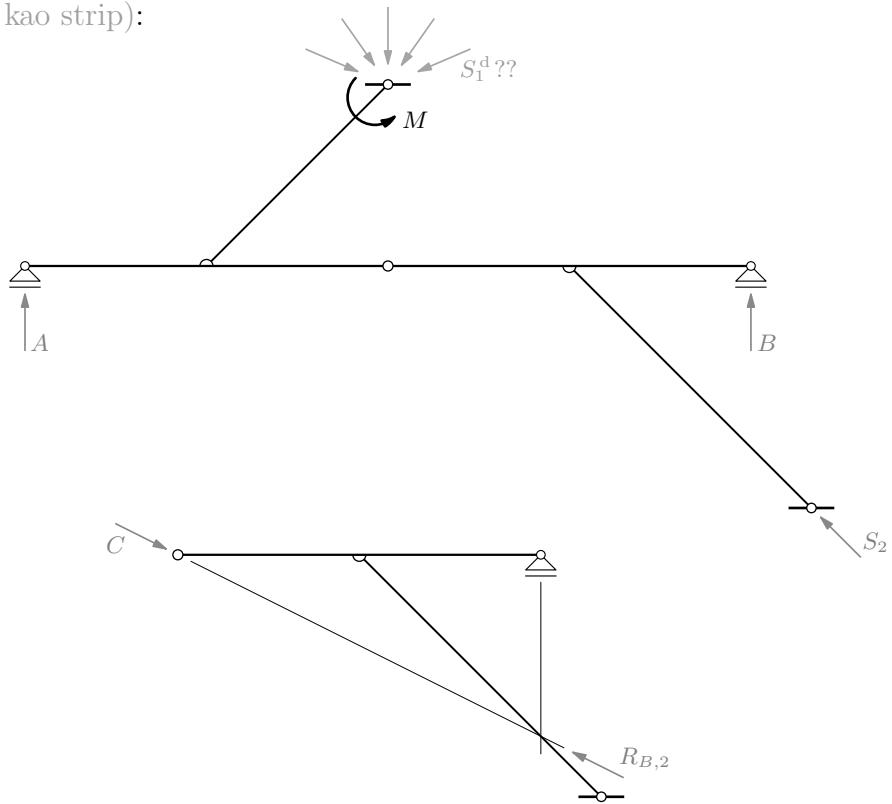

$M = 100 \text{ kNm}$  (neposredno ispod ležajnoga zgloba)

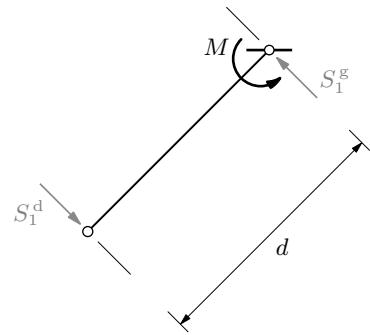

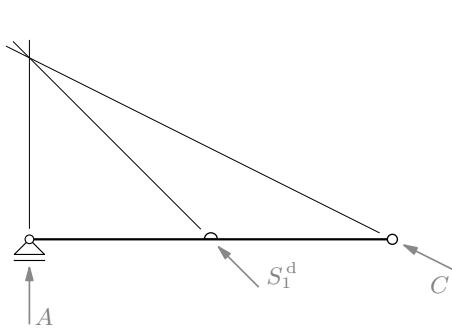

(Analogni je zadatak, sa silom kao opterećenjem, riješen i objašnjen na predavanju o grafičkim postupcima na nosačima koji su srodni trozglobnim nosačima. Crteži s predavanja dostupni su u odjeljku *Poduprta greda (2)* na stranici 3 datoteke <http://master.grad.hr/nastava/gs/gs1/sl/lng1.pdf>.)

**Način prvi:**

reakcije (nešto kao strip):

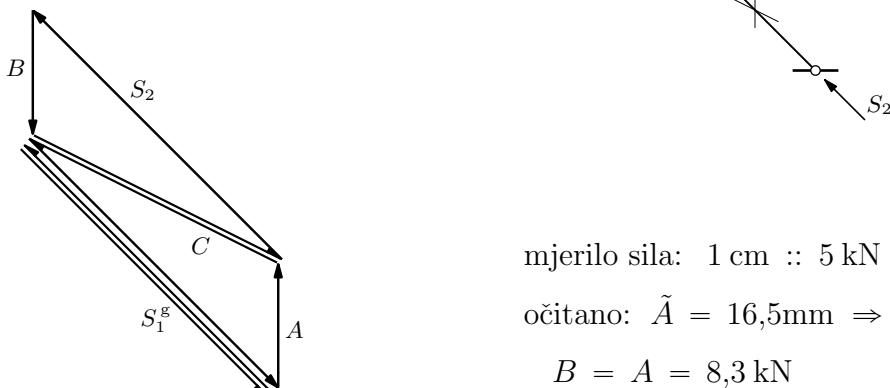

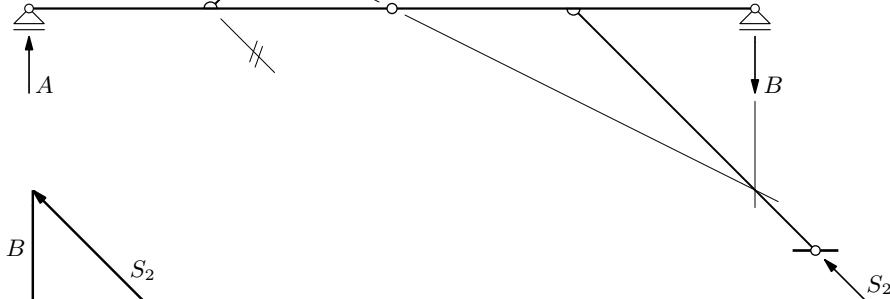

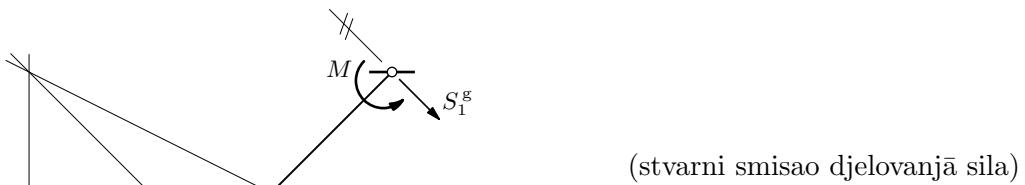

mjerilo duljina: 1 cm :: 1,25 m

očitano:  $\tilde{d} = 34,5 \text{ mm} \Rightarrow d = 4,3 \text{ m}$

$$(\text{ili, točnije, } d = \sqrt{3^2 + 3^2} = 4,24264 \text{ m})$$

$$S_1^d = S_1^g = \frac{M}{d} = \frac{100}{4,3} = 23,3 \text{ kN}$$

(smisao djelovanjā suprotan od nacrtanoga)

mjerilo sila: 1 cm :: 5 kN

očitano:  $\tilde{A} = 16,5 \text{ mm} \Rightarrow A = 8,3 \text{ kN}$

$$B = A = 8,3 \text{ kN}$$

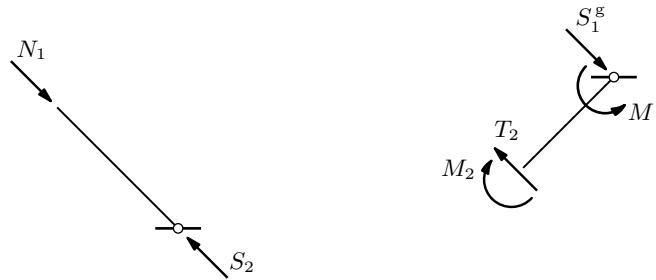

$$S_2 = S_1^g = 23,3 \text{ kN}$$

(djelomična provjera:

$\vec{S}_2$  i  $\vec{S}_1^g$  djeluju na istome pravcu  $\Rightarrow$  moment je uravnotežen (samo) spregom sila  $\vec{A}$  i  $\vec{B}$ :

$$A = B = \frac{100}{12} = 8,3 \approx 8,3 \text{ kN}$$

vrijednosti sila u presjecima:

$$N_1 = S_2 = 23,3 \text{ kN}$$

$$T_2 = S_1^g = 23,3 \text{ kN}$$

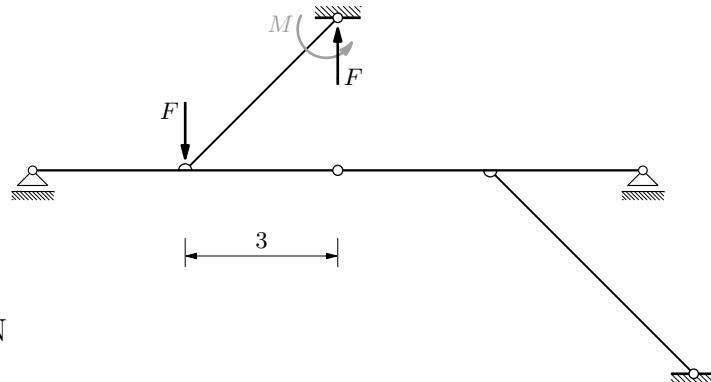

$$M_2 = M - \frac{d}{2} S_1^g = 100 - \frac{4,3}{2} \cdot 23,3 = 49,9 \approx 50 \text{ kNm}$$

(točna je vrijednost 50 — vrijednost se linearno mijenja od 100 neposredno ispod ležajnoga zgloba do 0 neposredno iznad zglobnoga spoja s gredom)

smisao djelovanja sila i smisao vrtnje momenta kao na slici

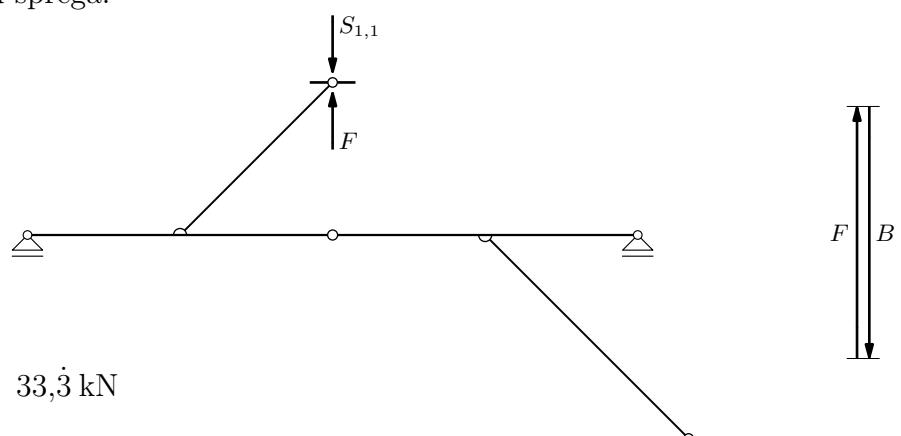

### Način drugi:

„pretvaranje“ opterećenoga štapa u zglobni štap:

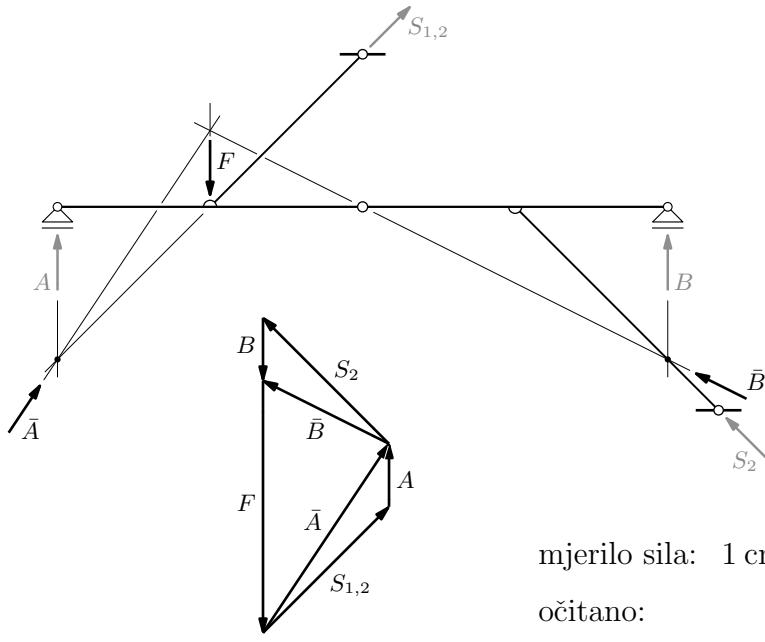

reakcije:

za desnu silu sprega:

$$S_{1,1} = F = 33,3 \text{ kN}$$

za lijevu silu sprega:

mjerilo sila: 1 cm :: 10 kN

očitano:

$$\bar{A} = 30 \text{ kN}$$

$$S_{1,2} = 23,5 \text{ kN}$$

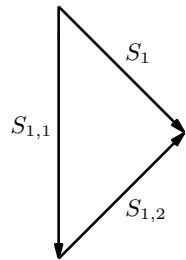

$$A = 8,25 \text{ kN}$$

$$\bar{B} = 18,5 \text{ kN}$$

$$S_2 = 23,5 \text{ kN}$$

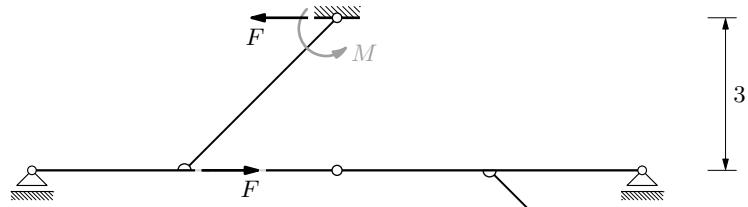

$$B = 8,25 \text{ kN}$$

$$S_1 = 23,5 \text{ kN}$$

vrijednosti sila u presjecima: kao u načinu prvom

kao zamjena momenta može se odabratи *bilo koji* spreg sila pravci djelovanja kojih prolaze zglobovima štapa (koji nije zglobni štap):

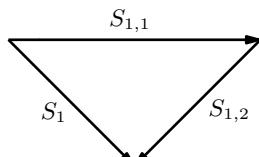

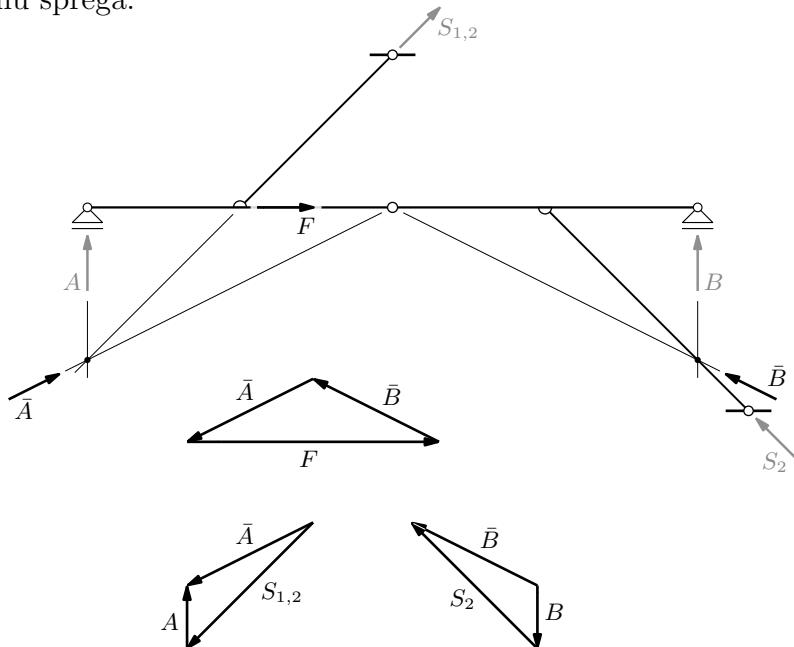

$$F = \frac{M}{3} = 33,3 \text{ kN}$$

reakcije:

za gornju silu sprega:  $S_{1,1} = F = 33,3 \text{ kN}$  (isti intenzitet i pravac djelovanja, suprotan smisao)

za donju silu sprega:

mjerilo sila: 1 cm :: 10 kN

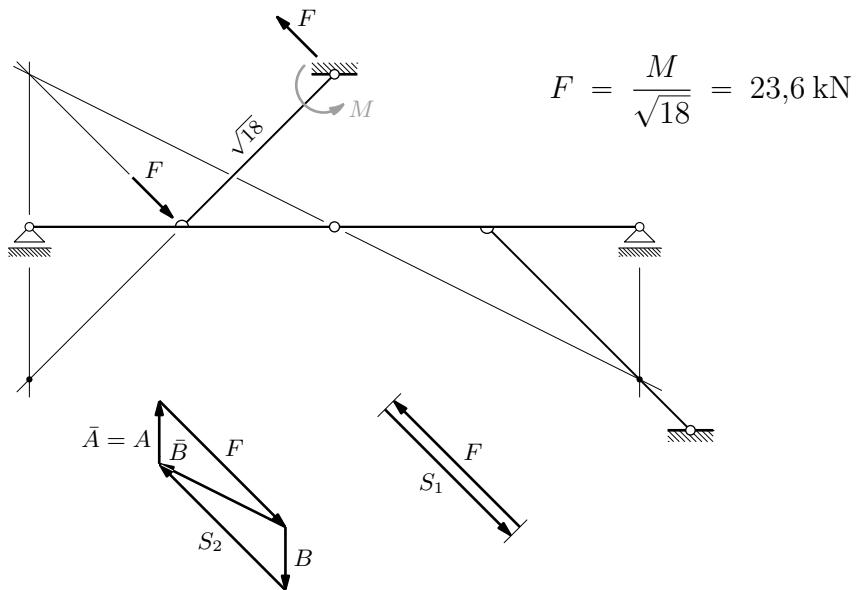

očitano:

$$S_2 = 23,5 \text{ kN}$$

$$S_1 = 23,5 \text{ kN}$$

vrijednosti sila u presjecima: kao u načinu prvom

ili zamjena momenta spregom sila okomitih na os štapa (koji nije zglobni štap):

očitano:

$$S_2 = 23,6 \text{ kN}$$

$$S_1 = 23,6 \text{ kN}$$

a vrijednosti sila u presjecima, naravno, ponovno kao u načinu prvom
