

Utjecajne funkcije i utjecajne linije

I. Statički određeni sistemi

Funkcija $\eta_{\mathfrak{F}_{x_t}}$ položaja jedinične sile, čija je vrijednost vrijednost statičke ili kinematičke veličine \mathfrak{F} u odabranoj točki x_t na nosaču, prouzročena djelovanjem te jedinične sile, naziva se *utjecajnom funkcijom* za veličinu \mathfrak{F} u točki x_t .

Utjecajna funkcija, drugim riječima, preslikava položaj jedinične sile, koja se „kreće” po nosaču, u vrijednost tom silom izazvane sile ili pomaka u prethodno odabranoj točki nosača:

$$\eta_{\mathfrak{F}_{x_t}} : x \mapsto \eta_{\mathfrak{F}_{x_t}}(x).$$

[Iz predavanja *Gradjevna statika 1.*]

Grafički prikaz utjecajne funkcije na štapnim nosačima naziva se *utjecajnom linijom*.

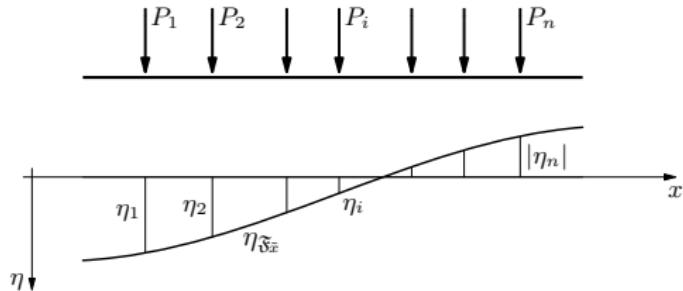

Utjecajna linija za neku veličinu je, prema tome, linija čije ordinate daju vrijednosti te veličine ako jedinična sila djeluje u točkama za koje očitavamo te ordinate.

Formalno, utjecajna je linija graf funkcije $\eta_{\mathfrak{F}_{x_t}}$:

$$\left\{ (x, \eta_{\mathfrak{F}_{x_t}}(x)) \in \mathbb{R}^2 : x \in [0, \ell] \right\}.$$

[Iz predavanja *Gradjevna statika 1.*]

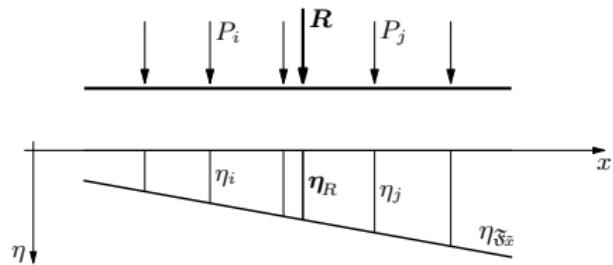

utjecaj niza koncentriranih sila:

$$\mathfrak{F}_{\tilde{x}}(\{\vec{P}_i\}_{i=1}^n) = P_1 \eta_1 + P_2 \eta_2 + \cdots + P_n \eta_n = \sum_{i=1}^n P_i \eta_i$$

[Iz predavanja *Gradjevna statika 1.*]

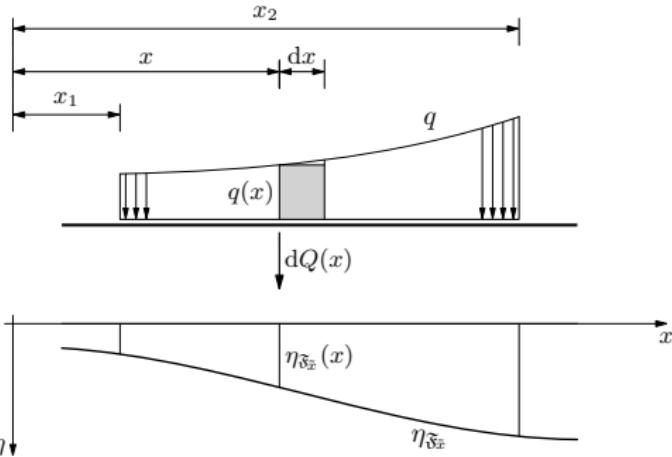

utjecaj niza koncentriranih sila:

$$\mathfrak{F}_{\tilde{x}}(\{\vec{P}_i\}_{i=1}^n) = R \eta_R = \mathfrak{F}_{\tilde{x}}(R)$$

[Iz predavanja *Gradjevna statika 1.*]

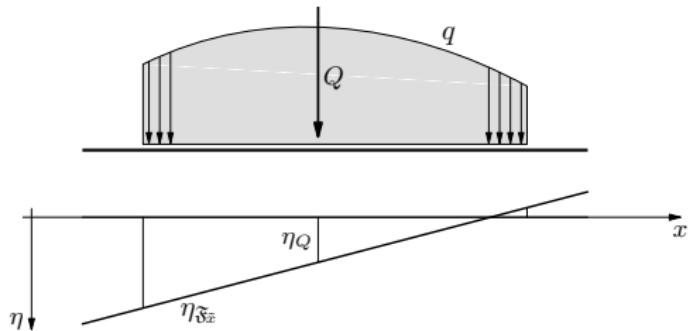

utjecaj distribuirane sile:

$$\mathfrak{F}_{\tilde{x}}(\vec{q}) = \int_{x_1}^{x_2} q(x) \eta_{\mathfrak{F}_{x_t}}(x) dx$$

[Iz predavanja *Gradjevna statika 1.*]

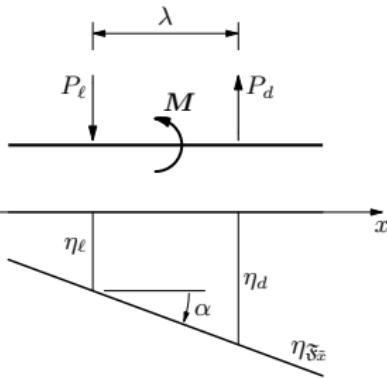

utjecaj distribuirane sile:

$$\mathfrak{F}_{\tilde{x}}(\vec{q}) = Q \eta_Q = \mathfrak{F}_{\tilde{x}}(\vec{Q})$$

[Iz predavanja *Gradjevna statika 1.*]

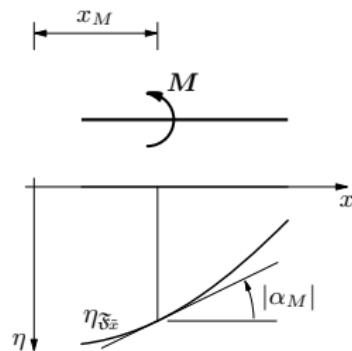

utjecaj koncentriranoga momenta:

$$\tilde{\mathfrak{F}}_{\tilde{x}}(\vec{M}) = -M \operatorname{tg} \alpha$$

[Iz predavanja *Gradjevna statika 1.*]

utjecaj koncentriranoga momenta:

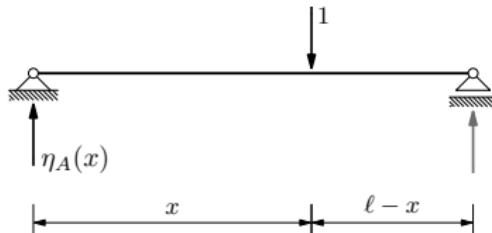

$$\tilde{\mathfrak{F}}_{\tilde{x}}(\vec{M}) = -M \tan \alpha$$

[Iz predavanja *Gradjevna statika 1.*]

statički postupak — jednostavno oslonjena greda:

UF & UL za reakcije:

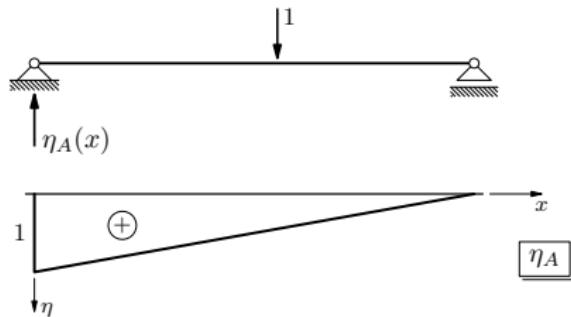

$$\sum M_{[A,B]/B} = 0 : \quad -\eta_A(x) \cdot \ell + 1 \cdot (\ell - x) = 0$$

$$\Rightarrow \quad \eta_A(x) = \frac{\ell - x}{\ell} \quad \text{za } 0 \leq x \leq \ell$$

statički postupak — jednostavno oslonjena greda:

UF & UL za reakcije:

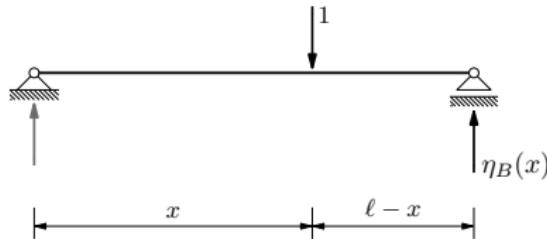

$$\eta_A(x) = \frac{\ell - x}{\ell} \quad \text{za } 0 \leq x \leq \ell$$

$$\eta_A(0) = \frac{\ell - 0}{\ell} = \frac{\ell}{\ell} = 1 \quad (\text{greška u skriptama})$$

$$\eta_A(\ell) = \frac{\ell - \ell}{\ell} = \frac{0}{\ell} = 0$$

statički postupak — jednostavno oslonjena greda:

UF & UL za reakcije:

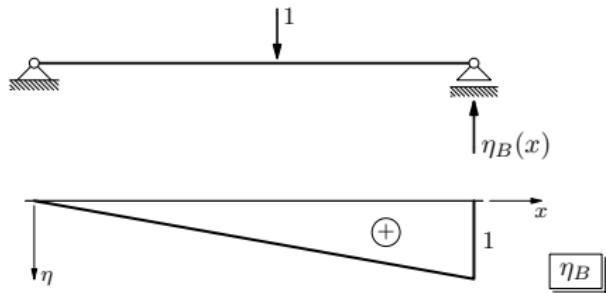

$$\sum M_{[A,B]/A} = 0 : \quad -1 \cdot x + \eta_B(x) \cdot \ell = 0$$

$$\Rightarrow \quad \eta_B(x) = \frac{x}{\ell} \quad \text{za } 0 \leq x \leq \ell$$

statički postupak — jednostavno oslonjena greda:

UF & UL za reakcije:

$$\eta_B(x) = \frac{x}{\ell} \quad \text{za } 0 \leq x \leq \ell$$

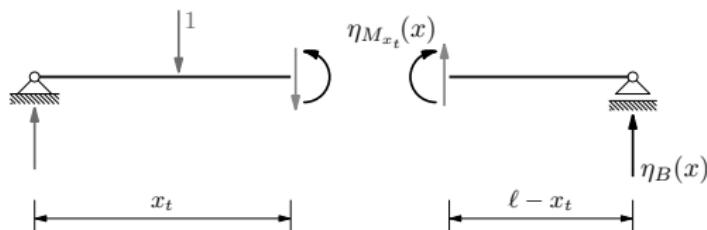

$$\eta_B(0) = \frac{0}{\ell} = 0$$

$$\eta_B(\ell) = \frac{\ell}{\ell} = 1$$

(greška u skriptama)

statički postupak — jednostavno oslonjena greda:

UF & UL za moment savijanju u presjeku x_t :

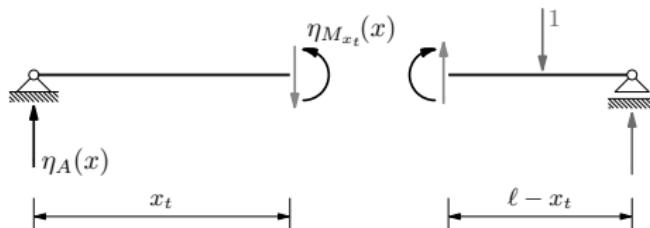

$$\sum M_{[x_t, B]/x_t} = 0 : \quad -\eta_{M_{x_t}}(x) + \eta_B(x)(\ell - x_t) = 0$$

$$\Rightarrow \eta_{M_{x_t}}(x) = \eta_B(x)(\ell - x_t) = \frac{x}{\ell}(\ell - x_t) \quad \text{za } 0 \leq x \leq x_t$$

statički postupak — jednostavno oslonjena greda:

UF & UL za moment savijanju u presjeku x_t :

$$\sum M_{[A, x_t]/x_t} = 0 : \quad -\eta_A(x) x_t + \eta_{M_{x_t}}(x) = 0$$

$$\Rightarrow \eta_{M_{x_t}}(x) = \eta_A(x) x_t = \frac{\ell - x}{\ell} x_t \quad \text{za } x_t \leq x \leq \ell$$

statički postupak — jednostavno oslonjena greda:

UF & UL za moment savijanju u presjeku x_t :

$$\eta_{M_{x_t}}(x) = \begin{cases} \frac{\ell - x_t}{\ell} x & \text{za } 0 \leq x \leq x_t \\ \frac{x_t}{\ell} (\ell - x) & \text{za } x_t \leq x \leq \ell \end{cases}$$

statički postupak — jednostavno oslonjena greda:

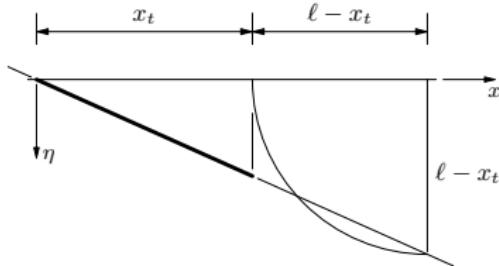

UF & UL za moment savijanju u presjeku x_t :

$$\eta_{M_{x_t}}(x) = \begin{cases} \frac{\ell - x_t}{\ell} x & \text{za } 0 \leq x \leq x_t \\ \frac{x_t}{\ell} (\ell - x) & \text{za } x_t \leq x \leq \ell \end{cases}$$

$$\eta_{M_{x_t}}(x_t) = \begin{cases} \frac{\ell - x_t}{\ell} x_t = \frac{x_t (\ell - x_t)}{\ell} \\ \frac{x_t}{\ell} (\ell - x_t) = \frac{x_t (\ell - x_t)}{\ell} \end{cases}$$

statički postupak — jednostavno oslonjena greda:

UF & UL za moment savijanju u presjeku x_t :

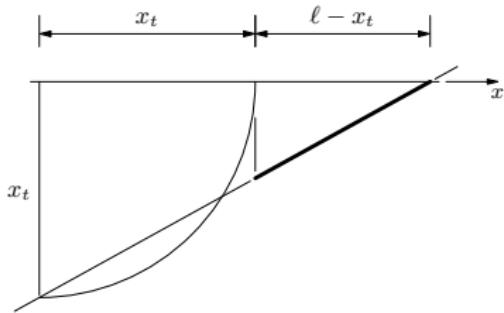

$$\eta_{M_{x_t}}(x) = \frac{\ell - x_t}{\ell} x \quad \text{za } 0 \leq x \leq x_t$$

$$\eta_{M_{x_t}}(0) = \frac{\ell - x_t}{\ell} \cdot 0 = 0$$

$$\eta_{M_{x_t}}(\ell) = \frac{\ell - x_t}{\ell} \ell = \ell - x_t$$

statički postupak — jednostavno oslonjena greda:

UF & UL za moment savijanju u presjeku x_t :

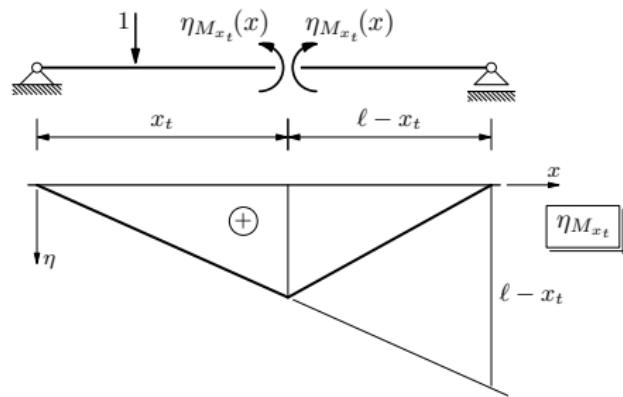

$$\eta_{M_{x_t}}(x) = \frac{x_t}{\ell} (\ell - x) \quad \text{za } x_t \leq x \leq \ell$$

$$\eta_{M_{x_t}}(0) = \frac{x_t}{\ell} (\ell - 0) = x_t$$

$$\eta_{M_{x_t}}(\ell) = \frac{x_t}{\ell} (\ell - \ell) = \frac{x_t}{\ell} \cdot 0 = 0$$

statički postupak — jednostavno oslonjena greda:

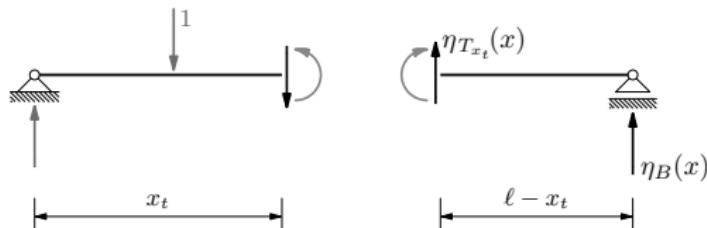

UF & UL za moment savijanju u presjeku x_t :

$$\eta M_{x_t}(x) = \begin{cases} \frac{\ell - x_t}{\ell} x & \text{za } 0 \leq x \leq x_t \\ \frac{x_t}{\ell} (\ell - x) & \text{za } x_t \leq x \leq \ell \end{cases}$$

statički postupak — jednostavno oslonjena greda:

UF & UL za poprečnu silu u presjeku x_t :

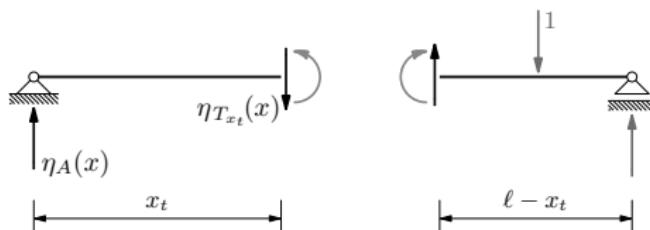

$$\sum F_{z, \langle x_t, B \rangle} = 0 : \quad -\eta_{T_{x_t}}(x) - \eta_B(x) = 0$$

$$\Rightarrow \quad \eta_{T_{x_t}}(x) = -\eta_B(x) = -\frac{x}{\ell} \quad \text{za } 0 \leq x < x_t$$

statički postupak — jednostavno oslonjena greda:

UF & UL za poprečnu silu u presjeku x_t :

$$\sum F_{z,[A,x_t]} = 0 : \quad -\eta_A(x) + \eta_{T_{x_t}}(x) = 0$$

$$\Rightarrow \quad \eta_{T_{x_t}}(x) = \eta_A(x) = \frac{\ell - x}{\ell} \quad \text{za } x_t < x \leq \ell$$

statički postupak — jednostavno oslonjena greda:
